TECHNICAL SKILLS

Programming – Python (Pandas, NumPy, PySpark), SQL (CTEs, Window Functions, Optimization), C++

Data Engineering – ETL/ELT Pipeline Development, Data Modeling (Star/Snowflake Schemas), Orchestration (Apache Airflow), Data Transformation (dbt), Data Quality & Governance

Cloud & Databases – Cloud Platforms (AWS/GCP/Azure), Cloud Warehousing (Snowflake, BigQuery), RDBMS (PostgreSQL, MySQL), NoSQL (MongoDB)

Analytics & BI – Power BI, Tableau, Advanced Excel (DAX, Power Query), Data Visualization, KPI Strategy, Reporting Automation

DevOps & Tools – Version Control (Git), CI/CD, Containerization (Docker), Linux/Shell Scripting, Monitoring (Grafana, Prometheus, Postman)

EXPERIENCE

Data Analyst

Jan 2026 – Present

Innovaccer Analytics

Noida, India

- Built and maintained scalable **ETL pipelines** in **Python** and **SQL** over large U.S. healthcare datasets, improving processing efficiency by ~30% and enabling reliable, production-grade data workflows.
- Engineered data transformations and automated **data-quality checks** across **Snowflake** and **PostgreSQL**, reducing reporting latency by ~40% and accelerating delivery of analytics-ready data to stakeholders.
- Designed a household-linkage **data model** that grouped 40k+, Medicaid members into shared households, surfacing 8 previously-missed high-risk patients and unlocking a new care-management use case that cut redundant outreach by 23%
- Developed **Power BI** dashboard with automated daily refresh, tracking 4 operational KPIs and patient-risk indicators for care-management teams and eliminating manual weekly reporting.

PROJECTS

Retail Sales Data Pipeline | *Airflow, PostgreSQL, Python, Power BI*

2026

- Designed an end-to-end batch **ETL pipeline** ingesting raw sales data into a star-schema **data warehouse**, orchestrated with **Airflow** DAGs on a daily schedule.
- Implemented data-quality and validation checks, modeled fact/dimension tables, and surfaced KPIs through a Power BI dashboard for stakeholders.

HealthScan | *React, Express, MongoDB, Google Vision API, Regex*

Apr. 2025

- Developed an AI-driven health-assistant chatbot that captured medical history and symptoms as **structured records** for downstream analytics.
- Integrated the Google Vision API to extract ingredient data from product labels and flag allergy risk against user profiles – a real-world healthcare **data-ingestion** flow.
- Secured 1st place at DevSummit'25 (80+ teams) for an innovative AI solution in digital health.

BuyWhatYouSee | *Selenium, Streamlit, OpenCV, PyTorch, YOLOv5*

Nov. 2024

- Designed an end-to-end **pipeline** that captured images, ran YOLOv5 object detection, and fed detected labels into product-search APIs to link matches to e-commerce platforms in real time.
- Demonstrated how computer-vision pipelines can power instant shopping and recommendation experiences as a lightweight Google Lens alternative.

EDUCATION

The LNM Institute of Information Technology

Jaipur, India

Bachelor of Technology in Computer Science

Oct. 2022 – May 2026

ACHIEVEMENTS

Hackathon Winner – 1st place at DevSummit'25 (80+ teams) for the *HealthScan* project.

Top 15 Teams – Ranked 13th at StackHack 2.0 for the *Mise-en-Movie* project.

Competitive Programming – Attained a Codeforces rating of 1376, and LeetCode rating of 1909, demonstrating proficiency in solving complex challenges under timed constraints.
